

## Jacket Vineyard System

Systems for professionals

## Jacket Vineyard System

**Professional protection for viticulture against hail, birds, insects, sunlight and much more. The Jacket Vineyard System is a simple, but good hail protection system for the vineyard. The system is also increasingly used in orchards. The Jacket Vineyard System is already installed in many vineyards.**

### Reduction of work

After the system is installed, the Jacket Vineyard System not only gives protection from outside threats but also saves work on the inside.

### Pruning

Hail nets also cause shoots to grow upward. In crop protection work, there is less trouble from the wind. Pruning over the nets is no problem at all. It is even possible to work with a pneumatic defoliator.

### Hail nets

FruitSecurity Holland has developed its own type of hail net. This in order to guarantee optimal safety. The tensile strength of each single wire is up to 3.5kg per wire. This comes down to 112kg per width meter. The thickness of a single wire is 0.32mm. The hail net is so strong that you can make a hammock out of it.

### Opening and closing

The WIESEL plaket model 13 is perfect for use with the Jacket Vineyard System. It makes the opening and closing of the protection system easier. And an additional advantage is that the plaket is dismountable.

## Type net

Our hail nets are made of high density polyethylene (PEHD). The mesh size of the hail net is 2.8mm x 8.7mm. Available in any desired width and length. Hail nets are available in different colors crystal, Light grey, Grey, Black and Milk white. Depending on the area and crop, the color is chosen.

## Row lengths

Any row length is possible: up to more than 1,000 meters. The Jacket Vineyard System can even be used on slopes and hills. Thanks to the fast application, the grapes remain easily accessible at all times.

## Plaket

Plakets connect nets. The different parts make it easy to attach the plaket to a hail net or insect net. The FruitSecurity nets open and close easily and quickly. This is important because this work is repeated every year.

## Winterfix

The Winterfix ensures easy storage in winter. It is the fastest, simplest and most economical solution for winter storage of hail nets. It is easy to assemble and the net can be left in the vineyard all year round. another advantage is that it requires little effort as the system is rolled up quickly and efficiently.

## Benefits, recommendations and tips

- ✓ Harvest reliability
- ✓ Optimal protection
- ✓ More workspace
- ✓ Saves up to 20 man hours per acre
- ✓ Any row length is possible
- ✓ Against sunburn
- ✓ Sustainable
- ✓ Cost savings on hail insurance
