

Car Protection System

Systems for professionals

Car protection system

Hail can cause enormous damage to cars. Windows can break and hail can cause huge dents. It is often not advantageous to repair the damage.

That is why FruitSecurity Holland has car systems for: lease companies, car (rental) companies or dealer holding companies. You may have everything well organised regarding your fleet management, but if your fleet is exposed to a heavy hailstorm or snow shower, your operational safety is at risk. Your fleet could be worth a lot less in a matter of minutes.

Insurers are also unsure what to do. There is often a tug-of-war over policy conditions and possible compensation. And this while customers and relations expect quality and impeccable service. FruitSecurity Holland has been installing car systems in all kinds of designs and countries for years. In the Netherlands, the weather is becoming more extreme and unreliable. That is why many leasing companies, car rental companies and dealer holding companies choose to have their

vehicle fleet GPS measured and request a tailor-made quote.

Our covers also protect against rain, snow and pollution such as bird droppings. This reduces the amount of work for car cleaners and the need to go to the car wash. You can save costs in many areas of your business with a car roof. Look, the car industry is reaping the benefits of all the developments and innovations in fruit cultivation and tree nurseries. In these sectors, canopies have been installed for years to protect the assets of the grower or nurseryman.

FruitSecurity Holland has several covers for the automotive industry.

“Future-proof your fleet”

Specifications

Type of net

The hail net is simple and practical in everyday use. It can be lifted by hand to reach the required clearance height. In the 'normal' position, the hail net is downwards so that the net provides optimal protection for the cars.

Clips and plaques

The clips and stickers used by FruitSecurity Holland have been used for years for both car and fruit covers. Therefore we can guarantee the optimal quality.

Clearance height

The clearance height is calculated specifically for each situation. Due to the customisation, the systems are easy to use in practice.

GPS measurement

When building a system, it is important to prepare it properly. Good preparation is important. Therefore FruitSecurity Holland has its own GPS department. Your fleet is measured by GPS and then drawn in 2D and 3D. This means no surprises during the project.

“FruitSecurity Holland devises, supplies and installs.”

Benefits, recommendations and tips

- ✓ Future-proof
- ✓ Optimal protection
- ✓ Years of experience
- ✓ Operational reliability
- ✓ 2D and 3D design
- ✓ Simple and practical
- ✓ Custom-made
- ✓ Cost-reducing
